

Broad Spectrum Light skin rejuvenation treatment targets brown pigment, age spots on face/neck/chest/hands and other areas. Also treats vascular lesions such as broken capillaries and rosacea. Essentially, this technology shines bright, intense light on various parts of the skin. Goggles will be placed over eyes for light protection. The hand piece is pressed and pulsed over the desired areas of the face/ body, emitting a light targeting reds and browns, heating up collagen beneath the skin and encouraging the body to produce more of this beneficial protein. Enhanced collagen production can assist in diffusing fine lines on the face as well as some shallow acne scars. IPL requires three or more treatments. Treatments cannot be performed on skin that is tan or darker skin types. For those who spend time in the summer sun, treatments should be done in the fall/winter months.

Cost:

- \$375 Single treatment face and neck
- \$1050 Package of 3 treatments

IPL PROVIDES A NON-ABIATIVE, "NO DOWN TIME" TREATMENT THAT ENABLES YOU TO RESUME REGULAR ACTIVITIES IMMEDIATELY
